

Von Castro

Software Engineer

Flutter, Dart, Supabase, Wear OS, React, AI-assisted workflows

Edmonton, AB | voncastro.dev@gmail.com | linkedin.com/in/voncastro | github.com/voncastro | voncastro.vercel.app

EXPERIENCE

Software Developer Intern - Intuit

Jan 2022 - Dec 2022

Financial software platform serving 100M+ customers worldwide.

- Contributed to QuickBooks Online dashboard SSR evaluation by converting core plugins, replacing or safely deferring incompatible libraries, and manually verifying data integrity with browser dev tools.
- Built a Slack-based on-call handoff automation at a company hackathon and shipped it to production for a 12-engineer team, linking docs, unresolved chats, and PagerDuty/Jenkins/Workday context; earned Spotlight recognition.
- Contributed to a QuickBooks Online plugin-health dashboard by cleansing plugin metadata for owners, contacts, versions, and dependencies, deduplicating stale or ownerless records for multi-team and leadership visibility.

Frontend Developer Intern - Cassidy eCare

Sep 2021 - Dec 2021

Early-stage health-tracking startup.

- Built React + Redux interfaces for login, patient profiles, and provider dashboards from Adobe XD mockups, handling validation, error, and empty states for the founder's pilot demos.
- Prototyped a Kotlin mobile login screen matching the existing design system, preparing validation and authentication integration points for later implementation.
- Maintained GitHub repo docs and code comments covering setup, API notes, and roadmap as the source of truth for the founder and future developers, easing handoff.

PROJECTS

dvup - Volunteer Contributor, Nolstar Studio

Mar 2026 - Present

Cross-platform Flutter + Supabase expense-splitting app.

Tech: Flutter, Dart, Supabase, PostgreSQL, Claude Code, OpenAI Codex

- Guided, reviewed, and manually tested a merged Settle Up CSV import feature that lets users migrate group expense history, verifying data integrity across preview validation, currency confirmation, and transactional import.
- Operated an AI-assisted PR workflow across a Flutter/Supabase codebase with 20+ tables and 40+ RPCs, briefing Codex and Claude with specs, reviewing diffs, and validating changes with automated tests and on-device QA before merge.
- Reviewed and validated expense ledger correctness fixes for settlement timezone drift, rounding bias, and currency conversion defects spanning Flutter UI, Dart domain logic, Supabase RPCs, migrations, and sync.

Setlio - Solo Developer

Apr 2026 - Present

Offline-first Flutter fitness tracker with Wear OS companion app.

Tech: Flutter, Dart, Drift SQLite, Supabase, Wear OS, PowerShell

- Building Setlio, an offline-first Flutter fitness tracker with workout logging, exercise creation, templates, and dashboard/calendar stats on Drift SQLite with Supabase sync, used for personal workouts since Apr 2026.
- Designed and validated Setlio's local-first architecture through AI-assisted implementation, covering Drift repositories, sync coordination, and Wear OS (Kotlin/Compose) flows, verified with physical smoke and mutation tests.
- Built an AI-assisted solo engineering workflow around SPEC and standards docs plus 60+ PowerShell scripts that gate doc drift, architecture health, test coverage, and Wear sync locally and in CI.

EDUCATION

Bachelor of Science in Computer Science - MacEwan University

Edmonton, AB | Graduated Nov 2023

SKILLS

Languages: Dart, JavaScript, TypeScript, SQL, Kotlin, Python

Frameworks: Flutter, React, Redux, Riverpod, GoRouter

Platforms: Android, Wear OS, Web

Backend / DB: Supabase, PostgreSQL, REST APIs, Edge Functions, Drift (SQLite), Firebase

Tools: Git, GitHub, Android Studio, PowerShell, Gradle, Sentry

AI tooling: Claude Code, OpenAI Codex, AI-assisted code review, spec-driven development
