

Von Castro

Software Engineer | Edmonton, AB (open to remote/relocation) | voncastro.dev@gmail.com | linkedin.com/in/voncastro | github.com/voncastro | voncastro.vercel.app

Early-career software engineer with a 12-month Intuit internship and shipped product work across Flutter, React, Supabase, and offline-first mobile systems.

EXPERIENCE

Software Developer Intern — Intuit (Jan 2022 – Dec 2022)

- Investigated server-side rendering for a multi-plugin page platform; measured load-time improvements of roughly 50% on tested plugins and documented the compatibility blockers a wider rollout would need to clear.
- Built a plugin-health dashboard adopted across the org as the shared view of plugin status, ownership, and real-time health; recognized twice by org leadership.
- Built an automated on-call handoff tool during a company-wide hackathon, replacing the manual context gathering engineers did before each shift.

Frontend Developer Intern — Cassidy eCare (Sep 2021 – Dec 2021)

- Owned the React/Redux web frontend of an early-stage health-tracking MVP, from component structure through API integration, reporting directly to the founder.
- Wrote architecture and onboarding documentation so new contributors could understand the system quickly enough to ship.

PROJECTS

dvup — Volunteer Contributor, Nolstar Studio (Mar 2026 – Present · expense-splitting app, live on the App Store and Google Play)

- Shipped a Settle Up CSV import end to end: Postgres migration, server-side validation, a multi-step Flutter flow, cross-currency confirmation, timezone-aware settlement dates, and split rounding that balances to the cent.
- Fixed multi-currency ledger correctness issues on the launched product.

Setlio — Solo Developer (Apr 2026 – Present · offline-first Flutter fitness tracker with a Wear OS companion)

- Built workout tracking and analytics on Drift SQLite with Supabase sync: an outbound sync queue, crash recovery, and Android foreground-service lifecycle handling, plus a Wear OS companion for phone-free logging.
- Maintains 60+ scripted PowerShell quality gates that run before every merge.

SKILLS

Languages: Dart, JavaScript, TypeScript, SQL

Frameworks: Flutter, React, Redux, Wear OS, Provider

Backend / DB: Supabase, PostgreSQL, Edge Functions, Drift SQLite, Firebase

Tools: Git, Xcode, Android Studio, PowerShell, Gradle, Claude Code, OpenAI Codex

EDUCATION

MacEwan University — BSc Computer Science, Minor in Business Studies (2023)
